## EMH500/600 SERVICING AVAILABILITY

Dear Valued Customers and Distributors,

In line with Liquip's notice last year stating that the EMH500 and EMH600 electronic register series have been obsolete since Q1 2017. This note is to advise customers that servicing of both models is no longer available through Liquip International. We have limited availability of spare parts for those who wish to service units. Please contact Liquip for any availability requests.

The EMH series has been a successful product within Liquip range since its introduction. Unfortunately, proprietary components are no longer available. However, Liquip will endeavour to maintain availability of some proprietary components where possible.

The EMH series is replaced by the DFV series of electronic register and level gauge monitor. The DFV series provides a functional comparison for EMH series register.

The DFV series monitor is available as a standalone Register, Level gauge CPU or combined unit, the DFV combines long service life with simple operation and reliability.

The DFV is a lightweight unit and is approved for use in Zone 1 hazardous areas (IECEX & ATEX) truck mounted or fixed site product transfer applications.

The DFV has various metrological approvals for use in a variety of geographical locations including but not limited to: Australia, USA, Europe, New Zealand.

[Click here to find out more about the DFV Electronic register series.](#)

If you have any questions relating to this bulletin, please contact your local Liquip Representative for
