STATIC REEL – LARGE DIAMETER

DATA SHEET

PART No: SR200

TITLE: Static reel with large diameter drum & cable guide, manual operation.

OPERATION: The unit is manual rewind as spring-rewind types have caused accidents when inadvertently released. Handle is free-spinning and more comfortable to use. The key to reliable operation is the use of a graphite brush bearing on a stainless steel shaft. It does not rely on body contact only as corrosion can create an insulating barrier.

FEATURES: To electrically bond two pieces of equipment to ensure the safe dissipation of static electricity charges. Typically when fuelling aircraft or pumping between a tanker and storage tank. Large diameter drum means less turns are required to wind cable back onto reel.

DISMANTLE: Always remove the cable, brush spring and brush before withdrawing the shaft and fit the shaft first when reassembling. For installation see attached.

ADJUSTMENT: None.
Check continuity regularly according to your company standards.

MOUNTING: See attached installation instructions.

TECHNICAL DATA:

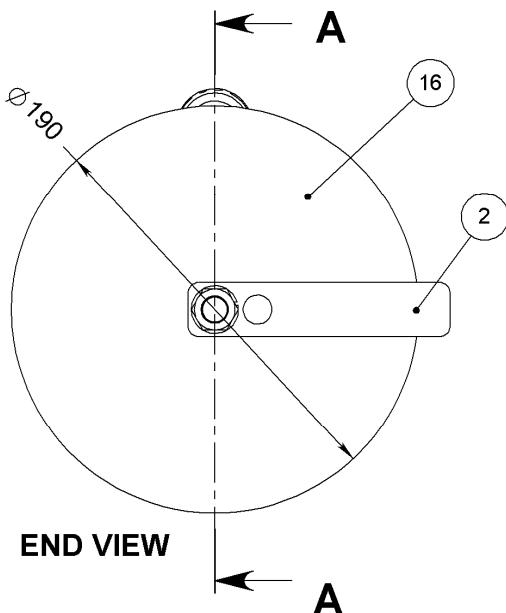

- Maximum end-to-end resistance 2 ohms.
- Carbon brush runs in sealed section to eliminate dirt and corrosion.
- Shaft has grease reservoir for all-of-life lubrication.
- SR200 will hold a max of 76m standard PVC coated wire (4mm diameter)
- Body -aluminium
- Shaft -stainless steel
- Cable Guide -zinc plated steel
- Brush -carbon
- *Note: Cable & static clamp are supplied separately*
- Weight: 2.4kg

ASSOCIATED EQUIPMENT: SR100 - Static reel base model
SR200 - Large diameter reel for faster winding c/w cable guide

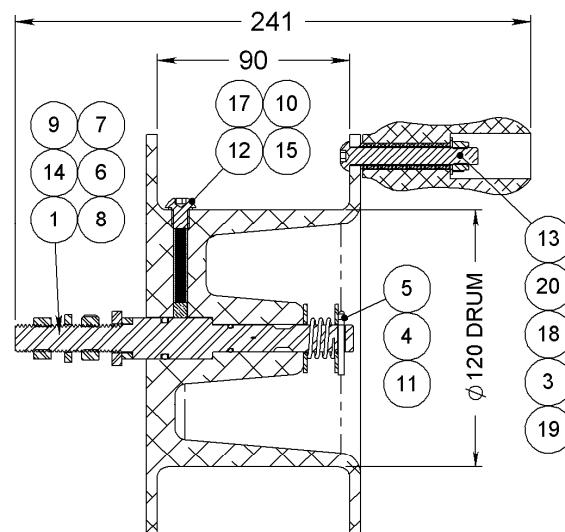

Overall dimensions shown on the drawing overleaf.

SR SERIES STATIC REEL Installation Instructions

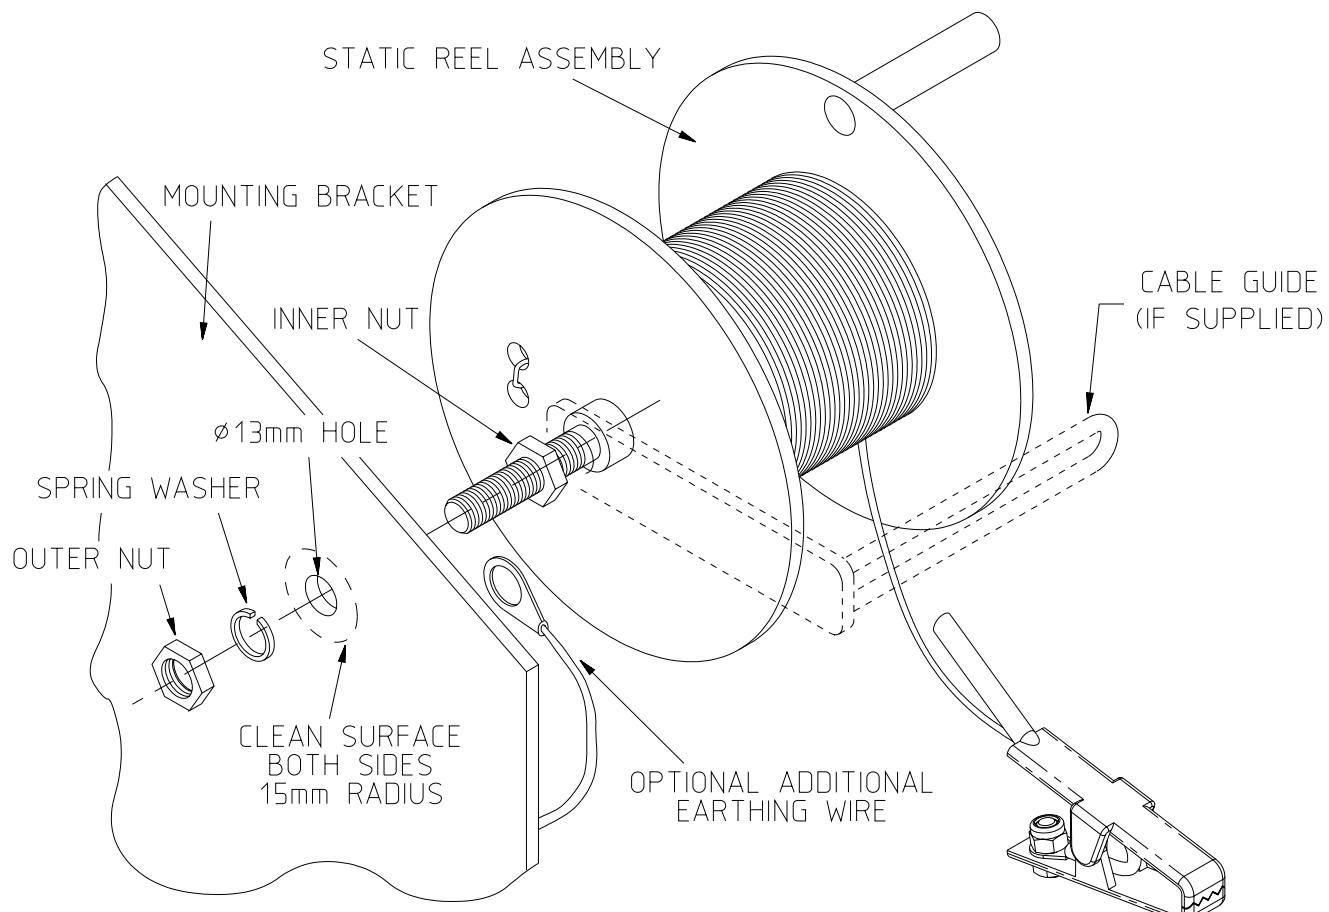

Part No: SR100-11

Good electrical conductivity at the mounting bracket is essential to the performance of the static reel.

The mounting bracket itself must be chosen for its continuity with the vehicle chassis and both sides of the mounting bracket must provide a clean, smooth, bare metal surface of at least 15mm radius from the centre of the 13mm diameter hole. Ensure the inner nut is tightened securely on the shaft and fasten the assembly with the outer nut and spring washer on the other side of the mounting bracket.

For SR200 reels, the spacer and cable guide are fitted onto the shaft first and the inner nut is fitted and tightened to hold the guide in the required position. The entire reel is then secured to the mounting bracket by the spring washer & outer nut on the other side of the bracket.

Further earthing continuity may be obtained by fitting a ring terminal and wire between the fixed nut and the mounting bracket and running it to a second earthing location on the chassis.
