

DigiGauge

Innovative digital measurement technology designed to provide accurate readings of pressure in a dry-bulk tank-truck trailer

- Accuracy rating to 1/10 pound
- Clearly visible beyond the length of the truck and trailer
- Alert indicator gives warning signal when 3-PSIG differential is exceeded

Civacon has developed a Digital Gauge Package for dry bulk trailers that revolutionizes the ease of unloading the tank. Its unique digital display of tank and line pressure has an accuracy rating to 1/10 pound. The large LED digits display pressure readings that are clearly visible beyond the length of the truck and trailer, making it easy for the driver to monitor these pressures from any location. A flashing display will alert the driver when a differential of 3PSIG is exceeded. This visual alarm indicator can divert potential problems instantly.

Unlike a standard liquid filled gauge, these digital gauges are not affected by vibration, temperature or humid ambient air. Water can't condense and accumulate causing malfunction and failure. And the aluminum housing adds extra protection and resilience.
